Allowable Subject Matter

1. Claims 1 and 3-8 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. The prior arts of record do not anticipate or render obvious to one skilled in the art a vertical alignment type liquid crystal display device in which a transmissive region for transmissive display and a reflective display region for reflective display are provided with a single dot region comprising various elements as claimed, more specifically a thickness-adjusting layer of the liquid crystal layer having an inclined plane in the vicinity of the boundary between the reflective region and the transmissive display region and electrodes being provided on the inner sides of each of the pair of substrates respectively, with an opening for controlling an alignment direction of the liquid crystal being provided at a position corresponding to the inclined plane of the thickness-adjusting layer of the liquid crystal layer in the electrode on the substrate opposite to the side where the thickness-adjusting layer is provided (Fig. 3).
4. The newly cited reference US 2003/0076464 (commonly owned) is related to a transflective display having a thickness-adjusting layer having an inclined plane. Further, US 2004/0061817 (commonly owned) is also related to a transflective liquid crystal display having a thickness-adjust layer with an inclined plane and a reflective electrode with an aperture formed on the substrate opposite to the side where the thickness-adjusting layer is formed and a transparent electrode is formed on the aperture. However, none of the references alone or in combination with any other prior art references teach or suggest the claimed liquid crystal display device specifically the
